

Working Prototype Known Problems Report

Product: Beads Net

Team: Weaver

Date: 12/02/2018

1. Some flaws in layout. It cannot adjust size. It may be fixed by adding some css styles or adding some divs.
2. Tags search don't have go to next page feature. The problem is the way we make the tag function. It needs some new implementation on search by tag function.
3. In the listview, if user search something and click the search button twice, it will go to next page.
4. If user click the next page and then search for somethings else without refreshing, the returned result will be the second page of the result. The problem is in the page function of javascript. Maybe refresh the counter after a new search will fix this problem and problem 3 as well.

Suggested User Stories:

1. Sprint 2:

-As a user, I want to get some results after I search for somethings in the search page because I want to locate my desired movie or anime.

2. Sprint 4:

- As a user, I want to see a list of results after search because I want to have a traditional way of searching for film.

- As a user, I want to see different appearance of results, because I want to understand which movie has more rating.

- As a user, I want the webpage looks neat because I don't want to use an ugly website.
