

Release Plan

Product Name: Beads Net
Team Name: Weavers
Release Name: 0.1
Release Date: Oct, 9, 2018
Revision Number: 0.0
Revision Date: Oct, 9, 2018

High Level Goals:

We wish to build a website that displays rankings of movies and animes. Instead of showing lists of movies, we want to construct a net-like ranking view. At the center of this net, there can be a movie with highest rate and its adjacent with lower rates. Center movies with higher rates and farther movies with lower rates. Moreover, we will equip this web with search bar so the users can search movies or animes by their names. We will also display some tags so users can search by movie genres. To build on that, we will provide information of movies on search result so users can have a brief view. Furthermore, users will be able to see detailed information of movies after they click on the movies.

User Stories For Release:

Sprint1:

- As a developer, I want a foundational website with basic features because I want to add more features later.
- As a user, I want to be able to login because I want to have my own account.

Sprint2:

- As a user, I want to explore my interests and save my discoveries because I do not want to lose my search results.
- As a user, I want to have a quick view of description of each anime or film without clicking it because it will be easy for me to see if the storyline is what I want instead of click on it and lead me to another page.

Sprint3:

- As a producer, I want my work to have more publicity because I can have more supporters.
- As a user, I want to find my desired anime or film by searching its name because it can be tedious to find them by searching through tags.
- As a user, I want to have a link direct to my target anime or film because it will be convenient for me to watch animes/movies directly instead of searching for it.

Product Backlog:

- Users can implement their own ranking lists
- Users can connect to social network account to share their discoveries
- Companies can present the advertisements of their products to customers more precisely.
